Introduction

United Christian Nethersole Community Health Service (UCN) is a sub-organisation of United Christian Medical Service.

Founded in 1972 by Dr Edward Paterson* based on "Hospital without Walls" concept, "Kwun Tong Community Health Project" provided professional, comprehensive and affordable health care service to the local community. In 1997, "Kwun Tong Community Health Project" merged with "Nethersole Community Health Service" to inaugurate as **United Christian Nethersole Community Health Service**.

Nowadays, **UCN** has developed into a versatile organisation with expertise on primary health care organisation. Based on "Holistic Health" model, **UCN** aims to promote health and prevent disease, conducive to realisation of "Leading a Healthy Life". The key service areas of **UCN** include:

- 🏥 Preventive Medicine & Clinical Service
- 🏥 Chinese Medicine & Chinese Medicine Specialty Service
- 🏥 Community Nutrition Service
- 🏥 Emotional Health & Counselling Service
- 🏥 Community Rehabilitation Service
- 🏥 Diagnostic Service
- 🏥 Social Service

UCN

* Dr Edward H. Paterson, a missionary doctor from England, had been the medical superintendent of the Alice Ho Miu Ling Nethersole Hospital and founding medical superintendent of the United Christian Hospital. As a surgical specialist, Dr Paterson also excelled at hospital planning and management. He spearheaded the concept of community nursing, and became a pioneer in community nursing service.

When the United Christian Hospital was still under planning stage in the 1960s, Dr Paterson foresaw the capacity of the Hospital would fall short of meeting the needs of the Kwun Tong population. Adopting the concept of "Hospital without Walls", he set up the "Kwun Tong Community Health Project" to go beyond the hospital walls and extend health care services to the community. This constituted a good foundation for **UCN's** development of primary health care service. On 16 March 1972, the first Community Health Centre was opened in Sau Mau Ping Estate.

Diabetes Mellitus Complication Screening Plans

Leading a Healthy Life

One-stop Services for Comprehensive Diabetes Mellitus Management Program

Diabetes is one of the most common chronic diseases in Hong Kong. One in ten Hong Kong people suffers from diabetes and over 20% of the patients are under the age of 40.

Due to insufficient insulin secretion or insulin resistance, patients will have the chance of raising high blood glucose level which in serious cases, can cause various severe complications, such as heart disease, kidney failure, blindness and foot gangrene. Though diabetes cannot be completely cured, with early detection and effective control, diabetics still can lead a normal life. People with diabetes should thus evaluate their health condition regularly, so as to reduce their chance for developing complications.

UCN provides Diabetes Mellitus Complication Screening Plans, covering aspects including drug therapy and complication risk evaluation, to focus on strengthening patients' ability to self-manage the disease. Together with individual diet counselling and Chinese medicine treatment, we offer comprehensive care to patients with diabetes and help improve their quality of life in the long run.

Case Follow-up Process

Diabetes Mellitus Complication Screening Plans

Early signs and symptoms of diabetes related complications are not always noticeable. Annual diabetes complication screening can help diabetes patient to evaluate the risks for developing complications. Doctors will recommend the most suitable screening package to patients based on his/her health condition.

Chinese Medicine Treatment for Diabetes

Traditional Chinese medicine takes prevention of disease as the main principle, which means treating the disease before it arises. Through diet therapy, traditional Chinese medicine, acupuncture or bloodletting therapy, it nourishes the liver and kidney, improves microvascular circulation. As a result, diabetic complications can be slow down or even be avoided, patient's quality of life can be restored. Complications include: diabetic retinopathy, diabetic foot and diabetic nephropathy.
